1. Find the equation of the line

a) Find the equation of the line passing through the points $(2, 3)$ and $(6, 7)$.

b) Find the equation of the line passing through the points $(-3, -1)$ and $(5, 3)$.

2. Generate 10 points from an equation

a) The equation of a line is $y = 2x + 1$. List 10 points that lie on this line.

b) The equation of a line is $y = -\frac{3}{2}x + 4$. List 10 points that satisfy this equation.

3. Find points from the equation of a line passing through two given points

a) The line passes through (3,5) and (7,9). Write the equation of the line and find 3 other points in the line.

b) The line passes through (-1,2) and (4,3). Write the equation of the line and find 3 other points in the line.
